Battery & Charging System Car Care Package

Amazing how resilient we Canadians are; even with that 'new normal' price at the gas pump knocking our socks off, people are still migrating out in all directions. Summer heat and packed highways can be pretty hard on a car's... battery... and you thought I was going to go into a fuel economy spiel. Too boring... I'll do that one next time.

Summer heat and faulty charging system components kill more batteries than the winter's cold. Adding to the strain on your car battery in the heat is the frequent use of electronic gadgets like GPS units, satellite radios, cell phone and blue tooth chargers. When temperatures outside reach the 30° mark (and to our surprise we had a LOT of that this summer), temperatures under your car's hood can reach 60° or more. All that heat amounts to a 33% increase in battery failure.

So we've put together a **Battery & Charging System Car Care Package**. Get the best performance out of your car and your cars battery before we roll into that 'other kind of weather'. All the details are on the flip side... **call, click or drop in.**
